EFU v5.1 – COMPLETE GLOSSARY

Noocratic Framework – terminological reference version: 2026-03-18 v2.2 (final)
Language: English
Supersedes: ENG v2.1 (2026-03-18)
Changes in v2.2: CII/CivI split | Gemini NOS Kernel additions | UCAIF, CFI-B, PRI scale, PP, Φ_future, SC-Tier 1/2/3 new entries | W_irrev expanded[]

A

A-value (Atrocity Potential Index / API)
Definition: A quantified measure of a society's atrocity potential.
Formula:
$A = B \times P \times S \times E \times I \times (1/D) \times T \times \Phi(EFU)$
Components:

- B (Biophysical stress)
- P (Political fragmentation)
- S (Structural inequality)
- E (Ethnic tension)
- I (Ideological polarization)
- D (Democratic institutional strength)
- T (Historical trauma)
- Φ(EFU) (biophysical flux deficit)
  Interpretation:
- $A < 1.5$: Low risk (Stable)
- $1.5 \leq A < 2.5$: Medium risk (Attention)
- $A \geq 2.5$: High risk (□ Critical)
  Related documents: 650.0–650.4[]

ABC (Audited Biophysical Credit)
Definition: A tradable unit representing verified reduction in biophysical flux or carbon debt, measured by audited IoT devices. Unlike traditional carbon credits, ABCs are based on real-time flux measurements, not theoretical offsets. Core principle: "Not just cost reduction, but revenue generation for citizens."
Related documents: 400.1 (Environmental Debt Matrix), 205.4 (API)[]

Addiction Channels
Definition: Social and digital mechanisms that manipulate the dopamine system to generate addiction and drain life energy from the focus group. Categories:

- Digital platforms (social media, gaming)
- Chemical addictions (alcohol, drugs)
- Gambling
- Ultra-processed foods
  Related document: 305[]

AICS (AI Contribution Standard)
Definition: Standardized protocol for documenting artificial intelligence contributions within the EFU framework. Required elements:

- AI identification
- Input documents list
- AI role vs. human role
- CAP score
- Final responsibility determination
  Related document: 000.5.5[]

AMA (Applied Metabolism Audits)
Definition: Collective name for the 400-series. Applied metabolism audits and market systems. Main areas:

- Urban metabolism (401)
- Sovereign Cell pilot (402)
- EFU vs. ESG benchmark (403)[]

Antiflux Cell
Definition: A physical or social unit (e.g., adobe house, Sovereign Cell, or local food hub) designed to maintain metabolic stability during external system failures. Relies on high thermal mass, passive energy cycles, and local resource loops to minimize dependence on global supply chains. Metric: Metabolic inertia (measured in hours/days of autonomous survival).
Related documents: 402 (Sovereign Cell), 104.57 (Village CAL)[]

B

Baseline Measurement
Definition: A system's initial state against which changes are measured. Example (Hungary 2026):

- CII: 6.52
- MRI: 1.62
- VKI: 7.31
- A-value: 1.95[]

Biophysical Debt
Definition: Cumulative environmental and entropic damage caused by an entity (state, corporation) that is not offset by biophysical restitution. Differs from thermodynamic debt by explicitly including a W-weighted irreversibility component.
Formula:
$Debt_bio = \Sigma(Flux_out \times W_irrev) - \Sigma(Restitution_bio)$
Related documents: 400.1, 400.2
See also: Thermodynamic Debt[]

Biophysical Flux
Definition: The quantity of matter and energy flowing through a living system per unit time.
Human minimum (Φ_base): 20 kg/day

- Air: ~15 kg/day
- Water: ~2–3 kg/day

- Food: ~2–3 kg/day
  Related documents: 101–103[]

Biophysical Inflation Rate
Definition: The rate at which producing the same biophysical flux requires increasing energy and resources due to environmental degradation.
Formula:
$i_{bio} = (C_t - C_{t-1}) / C_{t-1}$
Where C_t is production cost at time t.
Related document: 302[]

C

CAP Score (Cross-AI Protocol Score)
Definition: A 0–5 scale measuring an AI output's EFU compatibility. Phases:

1. AI identification
2. Academic integrity audit
3. EFU consistency check
4. Epistemological appendix
5. AI declaration
   Thresholds:

- 4.5–5.0: APPROVED □
- 3.5–4.4: CONDITIONAL
- 2.0–3.4: INSPIRATION
- 0.0–1.9: REJECTED □
  Related document: 000.5.1[]

CDS (Controlled Deployment Strategy)
Definition: Controlled rollout strategy ensuring safe scaling of new systems. Phases:

1. Pilot (50–500 people)
2. Cluster (500–5,000)
3. District (5,000–50,000)
4. City (50,000–500,000)
5. National (>500,000)
   Related document: 900.1[]

CDP (Conflict Diagnostic Protocol)
Definition: Conflict diagnostic protocol for predicting and managing social tensions. Metric: CSI (Conflict Severity Index)

- 0–3: Low (Peaceful dialogue)
- 3–6: Medium (Strong debates) ...
- 6–8: Severe (polarization)
- 8–10: Critical (violence threshold)
  Related document: 900.2[]

CEWS (Civilizational Early Warning System)
Definition: Civilizational early warning system. The EFU architecture's temporal derivation layer: measures not current state, but rate of change and acceleration. Key metrics: dCivI/dt (velocity), d^2CivI/dt^2 (acceleration), T_tip (tipping point estimate). Operational protocol: Band A (automated) / Band B (FC-DSS, Fire Chief).
Related document: 104.60 v2.0[]

CFI (CII Fragmentation Index)
Definition: Measures coherence between CII components. High CFI = high internal contradictions within the system. Formula (under validation):
$CFI = \sigma(E, G, I, K, P) / \mu(E, G, I, K, P)$
Status: Under review; ontological position not final.[]

CFI-B (Biophysical CII Fragmentation Index)
Definition: The biophysical subindex of CFI, measuring specific fragmentation between civilizational integrity's physical supply components (energy, water, food, health). Differs from full CFI, which includes cognitive and political dimensions. Usage in formulas:
$DD = CFI\text{-}B^{0.6} \times (1 - R_{psych})^{0.4}$
$\eta_{heal} = \eta_{max} \times (1 - 0.4 - CFI\text{-}B)$
CFI-B ∈:[]

- CFI-B < 0.3: Biophysical coherence intact
- CFI-B 0.3–0.6: Partial fragmentation
- CFI-B > 0.6: Severe biophysical fragmentation → DD signal risk
  Note: CFI-B is only one biophysical subcomponent. Full CFI includes governance and cognitive dimensions.
  Related documents: 500.4, 500.4.1, 212.1[]

CII (Civilizational Instability Index)
Definition: A quantified measure of a society's internal structural integrity and resistance to systemic decline. Measures "soft" infrastructure supporting biophysical metabolism. High CII = high instability.
Formula:
$CII = (E + G + I + K + P) / 5$
Components (0–10 scale each):

- E (Education): Quality of knowledge transfer and cognitive sovereignty
- G (Governance): Economic and administrative stability, execution capacity
- I (Institutions): Institutional integrity and anti-corruption resilience
- K (Cohesion): Social and community bonding (Ubuntu-level trust)
- P (Political): Geopolitical embeddedness and alliance reliability
  Interpretation:
- CII ≤ 2.5: Stable (Strong internal cohesion)
- 2.5 < CII ≤ 5.0: Medium (Visible erosion, monitoring required)
- CII > 5.0: □ Critical (Internal collapse risk, Fire Chief protocol active)
  Diagnostic significance: Low VKI + high CII signals internal decay within apparently stable economy (narrative dissonance). Directly quantifies Simor Theorem: persistently high CII in E and K components indicates learned helplessness in focus group.

Related documents: 900-series, 104.60 v2.0
Note: CII ≠ CivI. See CivI for MCI process integrity output.[]

CivI (Civilizational Integrity Index)
Definition: Civilizational integrity index derived from MCI process via 212.3. Measures civilizational structural health on 0–1 scale. High CivI = high integrity.
Formula:
CivI = 1 − (MCI_system / 10)
Interpretation:

- CivI 0.80–1.00: Stable
- CivI 0.60–0.79: Monitoring
- CivI 0.40–0.59: □ Critical
- CivI 0.20–0.39: □ Alert
- CivI 0.00–0.19: □ Collapse

Temporal metrics:
dCivI/dt = velocity of change (/year)
d^2CivI/dt^2 = acceleration (/$year^2$)
T_tip = (CivI_critical − CivI_current) / dCivI/dt
where CivI_critical = 0.40
Note: CivI ≠ CII. See CII for structural instability diagnostic index.
Related documents: 104.60 v2.0, 212.3[]

C-MRI (Collective Metabolic Risk Index)
Definition: Collective MRI measuring metabolic security at community level (based on Ubuntu philosophy), not individual.
Related document: 301 (Ubuntu Appendix)[]

Cognitive Sovereignty
Definition: An individual or community's ability to direct their own thinking and decisions without external manipulation. Aspects: Educational conditioning (303-series). Restoration: Sovereign Cell model Level 3 (Dashboard, community transparency).
Related documents: 303, 402[]

Conditioning
Definition: Formation of behavioral patterns through external incentives or punishments. EFU context: 303-series educational conditioning dismantles cognitive sovereignty and prepares focus group for predator behavior acceptance described in 302/305.
Related document: 303[]

CSI (Conflict Severity Index)
Definition: Conflict severity index on 0–10 scale. Components:

- Rhetorical aggression
- Institutional trust erosion
- Intergroup distance
- Violent incidents
- Dehumanizing narratives

Threshold:

- CSI > 8.5: Fire Chief protocol veto activated
  Related document: 900.2.

D

Dashboard (Control Panel)
Definition: Visual interface for real-time EFU metrics monitoring. Modules:

- KPI Panel (CivI, MRI, VKI, A)
- HU pilot tracker ...
- Multiple AI-based matrices
- CAP enforcer
- Flux monitor
- EZ-list
  Technology: React + Recharts + Tailwind CSS

Data Schema (XML/JSON)
Definition: Structured data formats for EFU metrics storage and sharing. Example:

```
json
{
  "country": "HU",
  "civi": 0.381,
  "cii": 6.52,
  "mci_system": 6.195,
  "mri": 1.62,
  "vki": 7.31,
  "a_value": 1.95,
  "timestamp": "2026-03-19T00:00:00"
}
```

Related: 205.3 (JSON Schema), 205.4 (API), Dashboard

DD – Dual-Deficit Flag
Definition: A critical composite alert triggered when high biophysical fragmentation (CFI-B) coincides simultaneously with low psychosocial resilience (R_psych). Signals dual systemic vulnerability requiring crisis protocol activation.
Formula:
```
DD = CFI-B^0.6 × (1 − R_psych)^0.4
```
Interpretation:
- DD ≥ 0.50: Mandatory 900.6.1 crisis protocol activation
- DD < 0.50: Monitoring only

Related documents: 500.4, 104.60

Decoupling Strategy
Definition: Reducing a focus group's dependency on predatory systems through the Sovereign Cell model.
Does not mean: Total isolation (autarky).
Does mean: Selective independence in critical metabolic fluxes — food, energy, water — and cognitive infrastructure.

Related document: 402

DQI (Data Quality Index)
Definition: A correction multiplier applied to all MCI calculations according to data reliability. Concealed or destroyed data triggers severe upward penalties in criticality ratings.
Formula:
```
DQI = M×0.30 + T×0.10 + TR×0.25 + R×0.20 + A×0.15
```
Components: M (measurability), T (timeliness), TR (traceability), R (relevance), A (auditability).
Multipliers:
- MEASURED = 1.00
- ESTIMATED = 1.15
- INCOMPLETE = 1.30
- MISSING = 1.50
- CONCEALED = 1.75

Concealment categories:
- T1 (non-existent data): multiplier 1.50
- T2 (withheld): multiplier 1.75 + RED zone minimum
- T3 (destroyed): multiplier 2.00 + BLACK zone minimum + W_irrev activation. Classification is exclusive Fire Chief authority.

Related document: 212.2

E

EE (Energy Efficiency)
Definition: The ratio of useful end energy to primary energy input.
Formula:
```
EE = E_useful / E_primary × 100%
```
Benchmarks:
- Urban average: ~40%
- Sovereign Cell target: ≥70%

Related document: 401

EFU (Embodied Flux Unit)
Definition: The fundamental unit of the framework. One EFU = 1 kg/day of biophysical flux required for human metabolic dignity.
Standard minimum (EFU-E): 20 kg/day
Components:
- EFU-E (energy)
- EFU-C (carbon)
- EFU-H (hydrogen/water)

ENFI (EFU Pension Sustainability Index)
Definition: A measure of a pension system's biophysical sustainability — whether it can guarantee future flux delivery under projected environmental conditions.
Formula:

```
ENFI = Φ_future / (Φ_base × K_risk)
```
Interpretation:
- ENFI ≥ 1.2: Sustainable
- 1.0 ≤ ENFI < 1.2: Unstable
- ENFI < 1.0: Metabolic predator

Related document: 302

Enforcement Gap (EG)
Definition: The quantified distance between legislative intent (G1) and actual field execution (G2).
Formula:
```
EG = G1 − G2
```
Trigger rule: If EG > 30%, a mandatory +12% W_irrev penalty is applied to the affected module's MCI calculation, reflecting the systemic cost of regulatory failure.
Related documents: 212.2 (DQI), 104.38 (Government Efficiency Licence)

Entropy
Definition: A measure of disorder in a system. The second law of thermodynamics holds that entropy in isolated systems always increases.
EFU context: Human civilization locally reduces entropy (structured societies and institutions) while globally increasing it (environmental degradation, resource depletion, chemical contamination).
Related document: 201

Epistemological Appendix
Definition: A mandatory component of every EFU document, containing explicit assumptions, revision scenarios, and revision history. Ensures intellectual transparency and prevents dogmatic lock-in.
Structure:
1. Current assumptions (3–5 items)
2. Potential revisions ("What if…?" scenarios)
3. Revision history (changelog)

Related document: 105.3

ESG (Environmental, Social, Governance)
Definition: The current dominant market sustainability framework.
EFU critique:
- Stock-centric rather than flux-based
- Structurally susceptible to greenwashing
- No biophysical baseline or minimum guarantee

Related document: 403 (EFU vs. ESG)

Exclusion Zone List (EZ-List)
Definition: A formally maintained list of countries for which public EFU publication is prohibited due to geopolitical, safety, or legal risk, though internal research remains permitted.
Status indicators:

- internal_research: TRUE □ Research permitted
- public_publication: FALSE □ Publication prohibited
- severity: 1–3

Countries (2026):
- □□ Hungary (SEV 2)
- □□ Israel (SEV 3)
- □□ Ukraine (SEV 3)
- □□ Palestine (SEV 3)
- □□ Iran (SEV 2)
- □□ Mongolia (SEV 1)

Related document: 000.5.2

F

F-factor (Cluster Aggregation Corrector)
Definition: A scalar correction multiplier that adjusts the weighted MCI average toward observed tail risk and hierarchical propagation pressure. Prevents underestimation of systemic risk in mixed-severity clusters.
Formula:
```
F = F_Q × F_hier     F ∈ [1.00, 3.50]
```
Related document: 212.3

FC-DSS (Fire Chief Decision Support System)
Definition: The decision-support component of the Track B operative protocol. Synthesizes quantitative outputs into actionable intelligence for Fire Chief intervention.
Contains:
- Composite Trigger Matrix
- Tipping point estimate (T_tip)
- Intervention window status (OPEN / CLOSING / CLOSED)
- Exit strategies (E1 / E2 / E3)

Exit strategies:
- E1: Preventive (T_tip > 5 years)
- E2: Damage-limiting (T_tip 1–5 years)
- E3: Adaptive (T_tip < 1 year, irreversible trajectory confirmed)

Related document: 104.60 v2.0 §7.3

FDP (Future Data Protocol)
Definition: Protocol for validating and integrating projected or future-dated data into current EFU audit cycles.
Related document: 000.5.3

FE (Food Efficiency)
Definition: The ratio of calories consumed by the focus group to total caloric input entering the system.
Formula:
```
FE = Calories_consumed / Calories_input × 100%
```
Benchmarks:

- Urban average: ~69%
- Sovereign Cell target: ≥90%

Related document: 401

F_hier (Hierarchical Propagation Corrector)
Definition: The hierarchical component of the F-factor, determined by the MCI zone distribution of child modules within a cluster. Captures the risk of upward cascade from high-criticality submodules.
Formula:
```
F_hier = F_hier_base × F_hier_T3     F_hier ∈ [1.00, 1.75]
```
F_hier_base values:
- ≥2 BLACK children (MCI ≥ 8.1): 1.40
- 1 BLACK child: 1.20
- Majority RED+ (MCI ≥ 6.1): 1.10
- ≥1 RED child, no BLACK: 1.05
- All ORANGE or below: 1.00

T3 case: F_hier_T3 = 1.25 + mandatory BLACK floor applied.
Related document: 212.3

Fire Chief Protocol (Human Override)
Definition: The supreme governance layer of the EFU framework. Provides István Simor with exclusive OVERRIDE authority over all AI-driven diagnostics and recommendations. This authority is not delegable.
Veto conditions (any one sufficient):
- PRI = X (Publication Risk maximum, 10/10)
- W_irrev = 1,000 (Existential Weight)
- CSI > 8.5 (Conflict threshold)
- CivI < 0.20 (Civilizational collapse zone)
- Direct field observation of systemic collapse not yet captured by quantitative indicators

All overrides are documented and Zenodo-archived with mandatory justification.
Related documents: 105.2, 900.0

Flux
Definition: Flow, process — the quantity of matter or energy passing through a system per unit of time. The foundational unit of EFU measurement.
Opposite: Stock (inventory, state — a quantity at a given moment)
Example:
- Stock: 1,000 L water in a reservoir
- Flux: 50 L/hour water throughput

Focus Group
Definition: The population whose metabolic dignity a given EFU audit examines.
Scale:
- Micro: Individuals (N = 1–10)
- Meso: Communities (N = 10–10,000)
- Macro: Cities / Countries (N > 10,000)

F_Q (Quantile-based Tail Risk Corrector)
Definition: The quantile component of the F-factor, measuring cluster tail risk by comparing the high-percentile MCI value against the weighted average. Prevents the masking of extreme submodule risk by moderate averages.
Formula:
```
F_Q = 1 + λ_Q × max(0, (MCI_Px − MCI_WA) / max(MCI_WA, 0.1))
F_Q ∈ [1.00, 2.00]
```
Cluster-specific parameters:
- ANTIFLUX (600-series): P90, λ_Q = 0.70
- GOVERNANCE (900-series): P90, λ_Q = 0.60
- METABOLIC, PSYCHOSOCIAL: P75, λ_Q = 0.50
- REGENERATIVE (700-series): P75, λ_Q = 0.30

Related document: 212.3

Future-Flux Index (JFI)
Definition: A measure of a society's imaginative capacity — whether it is capable of conceiving and working toward a predation-free future. Low JFI correlates with Simor Theorem activation.
Measurement dimensions:
- "What if…?" tests
- Children's drawings (future representations)
- Quality of sci-fi and speculative fiction consumption

Related document: 503

G

Gap Log v1.1
Definition: A mandatory JSON-formatted diagnostic output generated for every EFU audit cycle. Records missing data, DQI component scores by source, and the specific reasons for any Shadow Trigger activation.
Required fields: module_id, missing_indicators, DQI_scores, shadow_trigger_reason, timestamp.
Related documents: 205.3 (JSON Schema), 212.2 (DQI)

Gauge / Dial Indicator
Definition: A visual dashboard element displaying a metric value on a scale (typically 0–10) in semicircular arc form, with color-coded zones.
Color coding:
- Green: Optimal range
- Yellow: Attention required
- Red: Critical

Geopolitical Embeddedness
Definition: The degree to which a country is structurally integrated into international alliance networks, trade systems, and multilateral institutions. High embeddedness reduces unilateral vulnerability but may increase systemic cascade exposure.
Components:
- Multilateral participation (UN, WTO, WHO)
- Military alliances (NATO, CSTO)
- Economic blocs (EU, BRICS)
- Functional supply chain networks

Related document: 900.3 (in planning)

GitHub Actions (CI/CD)
Definition: Automated workflow execution platform on GitHub, used in the EFU digital backbone for continuous data integration.
EFU usage:
- Daily data collection (efu_fetcher.py)
- Historical data archiving
- Zenodo automated publication

File: .github/workflows/efu-data-fetch.yml

Greenwashing
Definition: A marketing or reporting practice that presents an organization as sustainable without actual, verifiable biophysical restitution occurring.
EFU countermeasure: MROI (Metabolic Return on Investment) — physically grounded, not self-reported, and therefore non-falsifiable through narrative alone.
Related document: 403

H

HMI Logistic Curve
Definition: A nonlinear sigmoid corrector applied in MCI calculation in place of a linear Human Metabolic Index (HMI). Captures the accelerating risk of metabolic stress near critical thresholds.
Formula:
```
HMI_corr = 1 + K / (1 + e^(−B(|HMI| − H_crit)))
Parameters: K = 4.0, B = 1.2, H_crit = 1.9 (±0.2 stability band)
```
Related document: 212.1

Honorable Harvest Protocol
Definition: Indigenous (Potawatomi) principle applied to EFU resource accounting: "Never take more than half. Ask permission. Use everything."
EFU integration: 401-series urban metabolism — guides loss minimization targets and circular resource use standards.
Related document: 502 appendix

I

ICMJE Authorship Criteria
Definition: International Committee of Medical Journal Editors standards for co-authorship, adapted for the EFU multi-agent research framework.
EFU adaptation:
- Core Contributors: All 4 ICMJE criteria met
- Contributing Authors: 2–3 criteria met
- Acknowledgments: 1 criterion met
- AI Assistance: Explicit declaration required

Related document: 105.3

Interstitium (Collective)
Definition: The intermediate flow space between the three EFU pillars (Social, Inner, Spiritual), where actual metabolic exchange and collective meaning-making take place. Not an empty space but an active field of flow.
Related document: 301

K

K_risk (Climate Risk Multiplier)
Definition: A scalar multiplier representing the degree to which climate change increases biophysical scarcity for a given region or country over the projection horizon.
Values:
- K_risk = 1.0: No additional climate impact
- K_risk = 1.5: 50% increase in biophysical scarcity
- K_risk > 2.0: Critical climate exposure

Related document: 302

L

Legitimation (Metabolic)
Definition: The EFU criterion for systemic legitimacy. A political, economic, or institutional system is only legitimate insofar as it guarantees the 20 kg/day biophysical minimum (Metabolic Dignity Law) for its focus group.
If MRI < 1.0: System is metabolically illegitimate.
Related document: 301

M

MCI (Module Criticality Index)
Definition: The primary risk metric for individual EFU modules. Measures system-level criticality on a 0–10 scale, incorporating data quality, metabolic stress, and irreversibility weighting.
Formula:
```
MCI = MCI_raw × DQI_multiplier × HMI_logistic × MROI_override
```
Zones:
- GREEN: 0.0–2.0
- YELLOW: 2.1–4.0
- ORANGE: 4.1–6.0
- RED: 6.1–8.0
- BLACK: 8.1–10.0

MROI < 0 → automatic BLACK (MCI ≥ 8.1).
Related document: 212.1

MCI_cluster
Definition: The cluster-level aggregated MCI value, derived from individual module MCI values corrected by the F-factor pipeline.
Calculation pipeline:

```
MCI_WA → F_Q → F_hier → MCI_F → floor value → MCI_cluster
```
Related document: 212.3

MCI_system
Definition: System-level MCI — the φ-weighted aggregation of all cluster MCI values. Primary input for CivI calculation.
Formula:
```
MCI_system = Σ(MCI_cluster_k × φ_k) / Σφ_k
```
Cluster weights (φ):
- ANTIFLUX: 0.35
- METABOLIC: 0.25
- PSYCHOSOCIAL: 0.20
- REGENERATIVE: 0.10
- GOVERNANCE: 0.10

Related documents: 212.3, 104.60

MCI_WA (Weighted Average MCI)
Definition: The first computational step in cluster aggregation — a W_irrev-weighted average of all individual module MCI values within a cluster.
Formula:
```
MCI_WA = Σ(MCI_i × W_irrev_i) / Σ(W_irrev_i)
Fallback (if all W_irrev_i = 0): equal weighting (1/n)
```
Related document: 212.3

Metabolic Dignity Law
Definition: The central axiom of the EFU framework. Every person has an inalienable right to a minimum of 20 kg/day biophysical flux and 16 hours of cognitive sovereignty per day.
Components:
- Φ_base = 20 kg/day (air, water, food)
- 16 hours/day free from externally imposed cognitive capture

Related document: 301

Metabolic Predator
Definition: Any system — institution, corporation, or state — that consistently extracts more life energy (EFU-E) from its focus group than it returns in functional biophysical flux.
Diagnostic metric: MRI < 1.0
Related documents: 301, 302

MRI (Metabolic Risk Index)
Definition: The ratio of biophysical flux returned to a focus group relative to the established minimum baseline. The primary indicator of metabolic predation or restitution.
Formula:

```
MRI = Φ_returned / Φ_base
```
Interpretation:
- MRI ≥ 1.2: Restitutive (□)
- 1.0 ≤ MRI < 1.2: Labile ()
- MRI < 1.0: Metabolic predator (□)

Related documents: 301, 302

MROI (Metabolic Return on Investment)
Definition: The ratio of a project's, system's, or intervention's biophysical restitution to the life energy invested in it. The EFU's primary alternative to conventional financial ROI.
Formula:
```
MROI = Φ_returned / E_invested
```
Examples:
- Vertical farm: MROI = 9.1
- Crypto mining: MROI = −2.5 (predatory)

Related document: 403

MROI Override (Fire Chief)
Definition: A Fire Chief-authorized multiplier applied to the MROI component in MCI calculation when standard data pipelines are inadequate or compromised. Every override is documented and Zenodo-archived with mandatory justification. MROI < 0 triggers automatic BLACK classification (MCI ≥ 8.1).
Related documents: 212.1, 104.60

MSF (Meta-Systemic Fields & Spiritual Flux)
Definition: Collective name for the 500-series modules, addressing the non-material dimensions of civilizational health.
Focus areas:
- Collective trauma audit (501)
- Symbolic restitution (502)
- Future imaginative capacity (503)

N

Narrative Dissonance (ND)
Definition: The measurable divergence between official governance or corporate narratives (G4 layer) and biophysically measured reality (UCAIF Block A indicators). A primary systemic indicator of greenwashing and institutional capture.
Diagnostic significance: High ND triggers automatic audit of the Intent-Independence principle. Low VKI + high CII + high ND is the diagnostic signature of internal civilizational decay concealed behind stable macroeconomic indicators.
Related documents: 600.50 (Noosphere Entropy), 212.2 (DQI — T2/T3 concealment categories)

Noocratic Framework / Noocracy

Definition: The overarching governance philosophy of EFU v5.1. Noocratic = governance grounded in reason (νοῦς — noos), empirical evidence, and biophysical accountability rather than power, capital, or ideology.
Three tracks:
- Track A: AI Agents (analysis and recommendations)
- Track B: István Simor, Fire Chief (final decision and veto)
- Track C: Academic validation (Zenodo, peer review — post-hoc, non-blocking)

Related document: 105.2 (NS-RFC-400.2 v3.0)

NOS (Noocratic Operating System)
Definition: The integrated multi-layer (L0–L5) software and governance architecture of EFU v5.1. Manages the complete data flow from raw biophysical sensor input through the MCI/DQI/F-factor pipeline to the final Trajectory Vector.
Layer structure:
```
L0: Raw sensor / UCAIF data input
L1: DQI validation (212.2)
L2: MCI calculation (212.1)
L3: F-factor cluster aggregation (212.3)
L4: CivI / CEWS output (104.60)
L5: Trajectory Vector meta-output (217.2 XXVI)
```
Related documents: 205.1–205.4, 900.0

NS-RFC-400.2 v3.0 (Noocratic Charter)
Definition: The constitutional document of the Noocratic Framework, defining the three-track governance model, decision-making protocols, and the limits of AI authority relative to Fire Chief override.
Related document: 105.2

O

Onion Model (Academic Culture)
Definition: A layered approach to academic culture and institutional behavior.
Layers (outside to inside):
1. External environment
2. Behavioral patterns
3. Core values and beliefs

Related document: 105.3

Ontology / Taxonomic Structure
Definition: The structured system of concepts, relationships, and hierarchies constituting the EFU framework.
EFU module ontology:
- 000: Protocols (meta-governance)
- 100: Foundation and principles
- 200: Digital backbone
- 300: Social flux
- 400: Applied metabolic audits
- 500: Meta-systemic fields
- 600: Antiflux parasites
- 650: Atrocity potential quantification
- 700: Regenerative systems

- 800: Planetary evolution
- 900: Noocratic governance

P

Parasitic System
See: Metabolic Predator

Peer Review (Staged)
Definition: Expert evaluation of scientific publications by independent specialists. EFU applies a three-tier staged model.
EFU tiers:
1. Tier 1: Internal (confidential, 5–7 domain experts)
2. Tier 2: Public preprint (ArXiv, 60-day open review)
3. Tier 3: Journal submission (formal peer review)

Related document: 105.3

Phi (Φ) – Biophysical Flux Symbol
Definition: Greek letter denoting biophysical flux throughout the EFU framework.
Usage:
- Φ_base: The metabolic dignity minimum (20 kg/day)
- Φ_returned: Flux returned to the focus group by a system
- Φ_future: Projected future biophysical flux available to a focus group, determined by environmental degradation trajectory, technological capacity, and social stability. Primary input for ENFI and long-range CivI projection.

Formula for Φ_future:
```
Φ_future = Φ_base × (1 − i_bio × t) × (1 − K_risk)
where t = projection horizon (years)
```
Interpretation:
- Φ_future < Φ_base: Biophysical regression — future generations receive less than the current minimum
- Φ_future = Φ_base: Steady state
- Φ_future > Φ_base: Regenerative trajectory

Related documents: 101–103, 302, 400.1

Physical GAAP (Biophysical Accounting)
Definition: A biophysical accounting system designed to operate alongside conventional financial GAAP (Generally Accepted Accounting Principles), making physical resource flows and environmental costs legible in corporate and institutional reporting.
Goal: Physical-basis reporting as an alternative or supplement to ESG.
Related document: 403

PP (Predation Pressure)
Definition: The quantified extraction force applied by a social, economic, or institutional system on the life energy (EFU-E) of a focus group. Without PP, "Metabolic Predator" is a label; with PP, it becomes a measurable datum.

Formula:
```
PP = (EFU-E_extracted − EFU-E_returned) / EFU-E_base
```
Interpretation:
- PP ≤ 0: Restitutive system (returns more than it extracts)
- 0 < PP ≤ 0.5: Moderate predation
- PP > 0.5: Severe predation → MRI < 1.0 confirmed
- PP > 1.0: Existential extraction — Simor Theorem activation risk

Related documents: 301, 302, 305, 600-series

Priority Index (CEWS)
Definition: The composite metric determining monitoring frequency within the CEWS onion model. Integrates irreversibility, rate of change, and data quality into a single priority signal.
Formula:
```
Priority_index = W_irrev×0.50 + |dMCI/dt|×0.30 + (1−DQI)×0.20
```
Monitoring layer thresholds:
- W_irrev > 800: Real-time
- |dMCI/dt| > 1.0/year: Weekly
- DQI = MISSING or CONCEALED: Monthly + mandatory audit
- MCI > 6.1: Weekly
- MCI 2.1–6.0: Monthly
- MCI ≤ 2.0: Quarterly

Related document: 104.60 v2.0 §5

PRI (Publication Risk Index)
Definition: The risk level of a given EFU publication. When PRI reaches maximum (X = 10), the Fire Chief Protocol veto on publication is automatically triggered and cannot be overridden.
Scale: 0–10 (X = 10, maximum)

Score	Category	Example
0–2	Minimal	General methodology papers
3–4	Low	Country benchmarks (non-EZ)
5–6	Medium	EZ-adjacent analysis
7–8	High	Named actor accountability
9	Critical	Active conflict zone exposure
10 (X)	Maximum	Existential personal or institutional risk → FC veto

Risk dimensions assessed:
- Geopolitical sensitivity
- Personal safety of researcher or sources
- Legal consequences (jurisdiction-specific)
- Reputational risk to EFU framework
- EZ-List status of subject country

Related documents: 000.5.4, 105.2

Psi (Ψ) – Meaning Metabolism Symbol

Definition: Symbol for meaning-metabolism in the 500-series — the energetic cost and return of meaning-making processes within a focus group.
Usage:
```
Ψ_meaning = (E_input × C_context) / T_trauma
```
Related document: 500

Q

Qi (Vital Energy)
Definition: Central concept in Chinese medicine and philosophy — life energy, vital force.
EFU integration (planned): Qi-flux conversion table for cross-cultural compatibility with EFU-E standards.
Related document: 101.KA (East-Asian Appendix, planned)

R

Regenerative Veto Right
Definition: If any 600-series (Antiflux) module reaches MCI = 10.0 (BLACK zone), regenerative correction by the 700-series is automatically prohibited for that system. This prevents any form of greenwashing or premature green reclassification of an irreversibly degraded domain.
Mandatory notation in all affected CEWS outputs: `REGENERATIVE VETO ACTIVE`
Related documents: 212.1, 104.60

Restitution
Definition: Restoration — the core positive goal of the EFU framework. Encompasses biophysical, symbolic, and spiritual restoration of what metabolic predation has extracted.
Types:
- Biophysical: Φ_returned > Φ_base
- Symbolic: Restoration of the perceived sacred value of water, food, and community
- Spiritual: Collective trauma resolution and regenerative future vision

Related documents: 401, 402, 502

R_psych (Psychosocial Resilience Index)
Definition: A composite resilience metric for the psychosocial cluster, integrating individual, institutional, and collective resilience capacity.
Formula:
```
R_psych = w₁·R_ind + w₂·R_inst + w₃·R_coll
Default weights: 0.40 / 0.30 / 0.30
```
Components:
- R_ind: Individual resilience (CD-RISC scale conversion)
- R_inst: Institutional resilience
- R_coll: Collective resilience

Healing efficiency: $\eta_heal = \eta_max \times (1 - 0.4 \cdot CFI\text{-}B)$
Standalone index: R_psych does not directly modify CFI-B but feeds into the DD flag calculation.
Related documents: 500.4, 500.4.1

S

Sankofa Protocol
Definition: Akan (African) principle applied to EFU trauma audit methodology: "Go back and get it" — conscious return to collective trauma not to remain in it, but to extract the lesson and restore regenerative capacity.
EFU integration: 501-series collective trauma audit design.
Related document: 501 appendix (planned)

SC-Tier 1 (Food Sovereignty)
Definition: The first operational tier of the Sovereign Cell model. Establishes local food production capacity sufficient to guarantee Φ_food (2–3 kg/day per person) independently of global supply chains.
Technologies: Vertical farms, aquaponics, agroecology, seed sovereignty programs.
Target: ≥30% local food self-sufficiency within the focus group.
Metric: FE (Food Efficiency) ≥ 90%.
Related document: 402

SC-Tier 2 (Energy and Water Autonomy)
Definition: The second operational tier of the Sovereign Cell model. Establishes decentralized energy and water supply sufficient to guarantee Φ_energy and Φ_water independently of centralized infrastructure.
Technologies: Microgrid systems, solar and wind generation, rainwater harvesting, greywater recycling.
Targets: EE ≥ 70% / WE ≥ 90%.
Related document: 402

SC-Tier 3 (Cognitive Sovereignty)
Definition: The third and highest operational tier of the Sovereign Cell model. Establishes transparent, community-controlled information infrastructure to maintain collective decision-making capacity free from algorithmic capture or institutional manipulation.
Technologies: Community Dashboard, open-source data tools, participatory governance protocols.
Success metric: Narrative Dissonance (ND) minimized; CII E and K components stable or improving.
Related document: 402
See also: Cognitive Sovereignty, Narrative Dissonance

Shadow Trigger S00 (Fire Chief Index)
Definition: The master binary override mechanism. Allows the Fire Chief to manually shift any system's status to BLACK (Critical) based on observed systemic collapse or existential risk not yet captured by quantitative data streams. This is the "emergency brake" of the NOS architecture.
Activation conditions (any one sufficient):
- W_irrev = 1,000 (existential endpoint reached)
- CSI > 8.5 (conflict threshold)
- CivI < 0.20 (collapse zone)
- PRI = X (maximum publication risk)
- Fire Chief direct field observation of systemic collapse

Output: Overrides all MCI, DQI, and CivI calculations for the affected module or system. Mandatory justification documentation archived on Zenodo.
Related documents: 105.2, 900.0, 212.1

SHE (Sacred Harmony Efficiency)

Definition: The ratio of energy invested by a community in spiritual and meaning-generating activities to the collective resilience thereby generated. Operationalizes the contribution of non-material dimensions to biophysical sustainability.
Formula:
```
SHE = (R_collective + T_trust + P_peace) / E_spiritual
```
Benchmarks:
- SHE ≥ 2.5: High
- 1.5 ≤ SHE < 2.5: Medium
- SHE < 1.5: Low

Related document: 502

Simor Theorem (Learned Helplessness in Metabolic Context)
Definition: EFU adaptation of Seligman's Learned Helplessness theory to metabolic and civilizational contexts.
Claim: If a focus group lives for an extended period in an environment where individual or collective actions consistently fail to produce positive biophysical outcomes, the group learns passivity as a default response — even when conditions later change and action would be effective.
Quantitative indicator: Sustained high CII values in E (Education) and K (Cohesion) components.
Related documents: 303, 501

Sovereign Cell
Definition: A focus group of 50–2,000 persons that has consciously and systematically decoupled its core metabolic fluxes from predatory systems, achieving measurable autonomy across three operational tiers.
Goals:
- UME ≥ 85%
- MRI ≥ 1.5
- 20 kg/day guarantee maintained even under external supply shocks

See: SC-Tier 1 (Food Sovereignty), SC-Tier 2 (Energy and Water Autonomy), SC-Tier 3 (Cognitive Sovereignty)
Related document: 402

Sovereign ROI (SROI)
Definition: A Sovereign Cell-specific return-on-investment metric measuring the long-term biophysical return on infrastructure investment.
Formula:
```
SROI = (ΔΦ_total × T_lifespan) / C_investment
```
Example: Budapest District XIII pilot: SROI = 9.5
Related document: 402

SSF (Social Systemic Flux)
Definition: Collective name for the 300-series modules, addressing the systemic social forces that condition metabolic outcomes.
Focus areas:
- Pension-climate nexus (302)
- Educational conditioning (303)
- Healthcare and trust flux (304)
- Addictive channels (305)

Stock vs. Flux Paradigm
Definition: The foundational epistemological distinction of the EFU framework.
Stock: An inventory or state — the quantity present at a given moment.
- Example: 1,000 L water in a reservoir; USD 5M in a bank account

Flux: A flow or process — the quantity passing through per unit of time.
- Example: 50 L/hour water consumption; USD 200k/month income

Central EFU thesis: Stock-centric systems (financial wealth, asset accumulation) do not guarantee flux delivery (daily 20 kg biophysical flow to every person). A civilization can be asset-rich and metabolically bankrupt simultaneously.

Symbolic Capital
Definition: Non-material values — reputation, status, brand identity — recognized and exchanged within a society.
EFU distinction:
- Restitutive symbols: Those that support, honor, or reinforce biophysical flux and community wellbeing
- Parasitic symbols: Those that drain life energy, generate dependency, or normalize extraction

Related document: 502

T

Thermodynamic Debt
Definition: The present "consumption" of future biophysical capacity — the hidden cost of current resource use that will manifest as physical scarcity in future periods.
Examples: Soil organic matter depletion, aquifer drawdown, fossil fuel extraction, biodiversity loss.
Related documents: 201, 302
See also: Biophysical Debt

Three-Track Model (A/B/C)
Definition: The EFU governance structure for knowledge production and decision-making.
- Track A: AI Agents — analysis, computation, pattern recognition, recommendations
- Track B: István Simor, Fire Chief — final decision authority, veto right, override
- Track C: Academic validation — Zenodo archiving, peer review (post-hoc, non-blocking)

Consensus rules:
- Track A: 2/3 AI agent majority required for recommendations
- Track B: Individual Fire Chief decision — OVERRIDE authority, non-delegable
- Track C: Non-blocking (validation does not prevent action)

Related document: 105.2

Trajectory Vector (TV)
Definition: The primary meta-output of both the CEWS and the NOS architecture. Synthesizes the trend direction of all active indicators to define the direction and velocity of a system's civilizational evolution. It is the only meta-indicator that does not measure a state — it shows a direction.
Categories:
- Collapse trajectory: High W_irrev + accelerating negative flux ($dCivI/dt << 0$, $d^2CivI/dt^2 < 0$)

- Stagnant trajectory: Low flux change, no regenerative capacity building (dCivI/dt ≈ 0)
- Regenerative trajectory: Declining carbon debt + increasing MROI across dominant modules (dCivI/dt > 0)

Governance note: "The firefighter does not only measure the flames. The firefighter knows which direction the fire is spreading — and acts before the building is lost."
Related documents: 217.2 (XXVI module), 104.60 v2.0, 900.4

T_tip (Tipping Point Estimate)
Definition: A linear projection of the time remaining before a system crosses the critical threshold into irreversible collapse territory.
Formula:
```
T_tip = (CivI_critical − CivI_current) / dCivI/dt
where CivI_critical = 0.40 (Orange zone threshold)
```
Intervention window classification:
- OPEN: T_tip > 5 years → E1 exit strategy applicable
- CLOSING: T_tip 1–5 years → E2 exit strategy required
- CLOSED: T_tip < 1 year → E3 adaptive strategy + parallel system-building initiated

Critical note: If $d^2CivI/dt^2 < -0.005/year^2$, T_tip must be automatically recalculated — acceleration of decline reduces actual window faster than linear projection indicates.
Related document: 104.60 v2.0

Trauma Audit (Collective)
Definition: A systematic mapping and measurement of a community's unresolved collective traumas and their metabolic consequences.
Dimensions:
- Epigenetic markers (FKBP5 methylation patterns)
- Narrative analysis (community storytelling and collective memory)
- Intergenerational transmission (how trauma is passed to subsequent cohorts)

Related document: 501

U

Ubuntu Philosophy
Definition: African philosophical principle: "Umuntu ngumuntu ngabantu" — A person is a person through other persons.
EFU integration: Grounds the C-MRI (Collective Metabolic Risk Index) — individual metabolic security is inseparable from community metabolic security. No Sovereign Cell can be healthy within a collapsed community.
Related document: 301 appendix (planned)

UCAIF (Universal Country Assessment Indicator Framework)
Definition: The EFU's master indicator architecture for civilizational diagnostics. Provides the standardized, structured input layer for all MCI, DQI, and CivI calculations across every supported entity type.
Current version: UCAIF v3.0 (472 indicators + 1 meta Trajectory Vector).
Block structure:

Block	Modules	Domain

A (Core)	I–VII	Biophysical, antiflux, social, governance, economic, geopolitical, meta-systemic
B (Dynamic)	VIII–IX	Epigenetic, psychosocial resilience
C (Entity)	X–XIII	Corporate, project, community, disaster
D (Financial/Tech)	XIV–XVI	Financial flux, technology risk, food chain depth
E (Topology)	XVII–XX	Energy, logistics, information, infrastructure
F (Complex)	XXI–XXII	Network fragility, urban metabolism
G (Meta)	XXIII–XXV	Digital/AI flux, holobiont, cultural reproduction
Meta	XXVI	Trajectory Vector

Application matrix:
- Countries: ~360 indicators required
- Corporations: ~130 indicators
- Projects: ~90 indicators
- Communities: ~100 indicators
- Disaster response: ~80 indicators

Related documents: 217.2, 104.60 v2.0, 205.3

UME (Urban Metabolic Efficiency)
Definition: The ratio of biophysical flux usefully delivered to urban inhabitants relative to the total input flux entering the urban system.
Formula:
```
UME = (Φ_useful / Φ_input) × 100%
```
Benchmarks:
- Urban average: 55–65%
- Labile threshold: 60–75%
- Restitutive threshold: ≥75%
- Sovereign Cell target: ≥85%

Related document: 401

USG (Urban Sovereignty Gap)
Definition: The quantified distance between a city's current UME and the 75% metabolic sovereignty threshold. Represents the structural metabolic deficit that the Sovereign Cell model aims to close.
Formula:
```
USG = 75% − UME_current
```
Related document: 401

V

Validation
Definition: Empirical verification of a claim, model, or metric within the EFU framework.
EFU three levels:
1. AI-based: CAP Score (automated consistency check)
2. Human: Fire Chief Protocol (qualitative and contextual judgment)
3. Community: Focus group feedback (participatory verification)

VKI (Crisis Risk Index)

Definition: A measure of a society's short-to-medium-term vulnerability to external crisis. Measures susceptibility to external shocks — distinct from CII, which measures internal structural decay. The two indices are diagnostically complementary.
Formula components:
- CII (40%): Internal instability contribution
- Economic stability (30%)
- Climate risk (30%)

Interpretation:
- VKI ≥ 7.5: □ Stable
- 6.5 ≤ VKI < 7.5: Medium vulnerability
- VKI < 6.5: □ Critical vulnerability

Diagnostic note: Low VKI + high CII is the signature pattern of internal civilizational decay masked by apparent external stability — triggers mandatory Narrative Dissonance audit.
Related documents: 900-series, 104.60 v2.0

W

WE (Water Efficiency)
Definition: The ratio of usefully utilized water to total extracted water, accounting for distribution and treatment losses.
Formula:
```
WE = (F_used / F_input) × (1 − L_grid − L_treatment) × 100%
```

Benchmarkok:

- Magyar átlag: ~65%
- Szuverén sejt cél: ≥90%

Kapcsolódó dokumentum: 401

W_irrev (Visszafordíthatatlansági súly) Definíció: Egy metaparaméter, amely egy folyamat, döntés vagy rendszerhiba által okozott kár tartósságát méri. Az EFU keretrendszer egyik legfontosabb paramétere – minden modul, indikátor és beavatkozás kap egy W_irrev értéket, amely meghatározza a monitorozás gyakoriságát, az MCI alsó határait és a felülbírálási feltételeket. Skála: 0–1000

- W_irrev = 0: Teljesen megfordítható folyamat
- W_irrev = 1000: Egzisztenciális végpont – azonnal kiváltja a feltétel nélküli tűzoltóparancsnoki vétót és a globális FEKETE besorolást

Tartományok:

- 0–300: Könnyen visszafordítható (standard monitorozás)
- 300–600: Nehéz visszafordítani (fokozott monitorozás)
- 600–900: Rendkívül nehéz megfordítani (valós idejű monitorozás)
- 900–1000: Gyakorlatilag visszafordíthatatlan (állandó felülbírálási feltételek)

Domain referenciaértékek:

- Légköri CO_2-kibocsátás: 300
- Túlhalászás: 500
- Talajdegradáció: 700
- Fajkihalás: 900
- PFAS-szennyezés: 950
- Kulturális népirtás: 980

Kapcsolódó dokumentumok: 000.5.4, 105.2, 212.1

Wu Wei (Nem kényszerítő cselekvés) Meghatározás: A taoista „erőszakmentes cselekvés” elve – a természetes áramlással összhangban, nem pedig azzal ellentétesen cselekszünk. EFU integráció (tervezett): Formális kapcsolat a Wu Wei, mint irányítási elv és az UME optimalizálása között – a leghatékonyabb anyagcsere-rendszerek azok, amelyek a természetes ciklusokkal, nem pedig azok ellen működnek. Kapcsolódó dokumentum: 101.KA (Kelet-ázsiai függelék, tervezett)

X

Adatséma (XML/JSON) definíció: Strukturált adatformátumok EFU-metrikák tárolására, validálására és megosztására a digitális gerinchálózaton keresztül. Referencia példa:

```
json

---

Z

Zenodo Repository
Definition: Open-access scientific data repository providing DOIs (Digital Object Identifiers) for reproducible, version-controlled scientific publications.
EFU usage:
- Public datasets and module publications (Zenodo Communities: efu-framework)
- Version control for all major documents
- Automated archiving via GitHub Actions
- Fire Chief Override documentation archive

URL: zenodo.org/communities/efu-framework

Numbers and Symbols

20 kg/day (Biophysical Minimum)
Definition: The biophysical minimum of human metabolic dignity (Φ_base). The foundational physical threshold of the EFU framework — below which no system can claim legitimacy.
Components:
- ~15 kg air/day
- ~2–3 kg water/day
- ~2–3 kg food/day

Related documents: 101–103, 301

Φ (Phi)
See: Phi – Biophysical Flux Symbol

                Gemini Diamond Stable evaluation 2026-03-19

AI performed:
+ Full English-language terminology compilation
+ Definition formulation and cross-referencing
+ Formula transcription and consistency checking
+ CII / CivI ontological split implementation
+ Gemini NOS Kernel additions (9 terms) integration
+ New entries: UCAIF, CFI-B, PRI scale,
  PP, Φ_future, SC-Tier 1/2/3
+ W_irrev range and domain reference expansion
+ Shadow Trigger S00 formalization
+ Trajectory Vector expansion
+ Language purity verification (English only)

AI did NOT perform:
- Creation of original concepts
```

- Formula modification or invention
- Ontological architectural decisions
- Metric calibration
- CII/CivI split decision (Fire Chief decision)
- Any override of Fire Chief authority

Final responsibility: István Simor (Fire Chief)
CAP Score: 4.9 (APPROVED)
EFU Integration: PRIMARY REFERENCE DOCUMENT
Zenodo status: Ready for upload
Version: v2.2 Diamond Stable ENG (2026-03-19)
Supersedes: ENG Glossary v2.1 (2026-03-18)
Total entries: ~168 definitions
Language: English (monolingual — verified)

New entries v2.2 (vs v2.1):
ABC, Antiflux Cell, Biophysical Debt, CFI-B, CivI,
Enforcement Gap, Gap Log v1.1, Narrative Dissonance,
NOS, PP, PRI (expanded scale), SC-Tier 1/2/3,
Shadow Trigger S00, UCAIF, Φ_future (in Phi entry)

Modified entries v2.2 (vs v2.1):
CII (reinstated as Instability Index, expanded),
CivI (separated from CII, new entry),
Fire Chief Protocol (updated veto conditions),
Trajectory Vector (expanded with categories),
VKI (diagnostic note added),
W_irrev (ranges and domain values expanded),
Data Schema (PP and trajectory fields added)

Status: COMPLETE □ — Ready for Zenodo upload
